Case Studies

Course Conversion

A leading international company had a real tough competition from other print and online publication than ever before. Their catalogue courses required innovation in layout and design without modifying the content. Around 300 courses were required to be converted to engaging eLearning modules. As a service provider we ramped up a new team within three weeks and trained them on a particular tool and then kick-started the project work.

Because of our meticulous planning & quality parameters, we maintained high levels of productivity and met every milestone with ease. We delivered all 300 courses on time within budget. This project enabled us to be up there as an organization that knows how offline training content can be converted to highly engaging eLearning contents/modules.

Compliance

Need of a client was to create eLearning modules for compliance program across many states. We collaborated with the SME (Subject Matter Expert) to analyze the content and the requirement of the client and came up with design strategies and selected the course authoring tool that best suited the business requirement.

This was an end-to-end eLearning design & development project that was delivered under a strict timeline. There were multiple stakeholders and coordination amongst all was a key factor to make the entire project successful.

There were pre-defined checks & balances to ensure quality parameters were maintained at every milestone. We worked in tandem with client expectations and ensured absolute success. We followed a very well-defined communication protocol with daily status reporting, conference calls and project management. Client appreciated our process, strategies & value additions. Great repeat business followed due to the overall success of the project.

Testimonials

Having known Satya in a previous role, we put in place a close working relationship with HexaLearn, and have been very pleased in the work that they have done for us. As with any relationship, the more effort you put into it, the better the outcomes. The HexaLearn team are lovely to work with, quick to learn, good at communicating and produce quality output. They are always keen to improve and strive for high quality. We very much like working with them.

eLEARNING COMPANY (UK)

This looks fantastic! I love it! Super fun feel vs “test” feel. I’ll keep an eye out for more opportunities to use this so definitely save a “template” version as well.

LOGISTICS COMPANY (USA)

My experience working with HexaLearn has been great. The team was able to provide the requested templates and courses in the agreed upon timeframe. They were even able to provide animations, new icon development, as well as advanced triggers/actions in course files on a very short development timeline. The first draft is always very solid with minimal updates needed. I look forward to working with HexaLearn on future projects.

LOGISTICS COMPANY (USA)

Innovation is building from the tools and technologies available – HexaLearn leverages tools, technologies and methodologies to the best and delivers the optimum solution. HexaLearn makes it easy for the clients and partners to go through the entire process from prototyping through delivery making the process transparent. We are thoroughly impressed with HexaLearn’s ability to manage projects of various sizes with maturity of a large sized company and flexibility and agility of a small company.
